Notice

This publication is made up of a combination of extended abstracts and full papers, submitted by the authors without peer review. The papers in this volume should not be cited as primary literature. The Physiology Section of the American Fisheries Society offers this compilation of papers in the interests of information exchange only, and makes no claim as to the validity of the conclusions or recommendations presented in the papers.

For copies of these Symposium Proceedings, or the other 30 Proceedings in the Congress series, contact:

PREFACE

Symposium Organizers:

Ben Letcher	DonMacKinlay
Conte Anadromous Fish Research Cntr	Fisheries Canada
Turners Falls, MA USA	

CONGRESS ACKNOWLEDGEMENTS

This Symposium is part of the International Congress on the Biology of Fishes, whose main sponsors were Fisheries and Oceans Canada (DFO), the University of Aberdeen, Scotland and the US Department of Agriculture. The main organizers of the Congress, on behalf of the Physiology Section of the American Fisheries Society, were Don MacKinlay of DFO (overall chair, program and proceedings), Jan Flint (registration and accommodations) and Dominic Houlihan, University of Aberdeen (local arrangements). Preparation of the Proceedings was accomplished with the editorial and word-processing assistance from Cammi MacKinlay and Karin Howard.

I would like to extend a sincere 'thank you' to the many contributors who took the time to prepare a written submission for these proceedings. Your efforts are very much appreciated.

Don MacKinlay
Congress Chair

TABLE OF CONTENTS

Causes and consequences of sexual differences in individual brook trout growth rate <i>Hutchings, J.</i>	1
Sources of growth rate variation in individual Atlantic salmon parr <i>Letcher, Ben and G. Gries</i>	5
Individual variation in growth and habitat use of brown trout during winter <i>Greenberg, Larry and J. Elso</i>	9
Seasonal variation in patterns of compensatory growth in Atlantic salmon <i>Metcalf, Neil, C. Bull and M. Mangel</i>	13
Habitat suitability assessed by a model of the growth of salmon parr. <i>Bacon, Philip J. et al.</i>	17
Across year variability in patterns of density, survival, size, and growth of juvenile Atlantic salmon in the Connecticut River: Insights for restoration <i>Mather, Martha, C. Campbell and J. McMenemy</i>	23
Self-thinning in brown trout: linking growth and population dynamics. <i>Rincon, Pedro and J. Lobon-Cervia</i>	27
Assessing the anadromy of salmonids using analysis of scale microchemistry and growth patterns <i>Courtemanche, D, J. Carrm and R.A. Curry</i>	31
Drifters versus residents: assessing size and age differences for Atlantic salmon fry <i>Bujold, Valerie and R. Cunjak</i>	37
Linking differences in consumption rates and growth efficiencies to intrinsic energy demands of migrant and resident brook trout <i>Morinville, G. R. and J. B. Rasmussen</i>	41
Anadromy versus residency in brook charr: the importance of growth during the early life history stages <i>Theriault, V. and J.J. Dodson</i>	45
Freshwater residence or migration in brook charr: influence on growth and associated age at maturity and age-specific fecundity <i>Lenormand, S. and J.J. Dodson</i>	51
Growth of stream-dwelling brown trout in central Spain: linking life-history and management <i>Nicola, Graciela and A.Almodovar</i>	55
When population and physiological ecology meet: chinook salmon spawning and the fate of their progeny <i>Beer, W. Nicholas, and J.J. Anderson</i>	59

The implications of maternal decisions for offspring growth and survival <i>Fleming, Ian and S. Einum</i>	63
Influence of male parental identity on the growth and survival of offspring in Atlantic salmon <i>Garant, Dany, J.J. Dodson and L. Bernatchez</i>	67
Spatial and temporal variability of juvenile Atlantic salmon size and of size-selective mortality rate: influence on the incidence of precocious sexual maturity in male parr <i>Aubin-Horth, Nadia and J. J. Dodson</i>	71
Spatial variation in the opportunity for growth during a potential critical period: Is there a link to survival for age-0 Atlantic salmon <i>Nislow, K. and C.L. Folt</i>	75
Effects of growth manipulation on growth, space use and dominance of juvenile Atlantic salmon in the wild <i>Martin-Smith, K. and J.D. Armstrong</i>	79
Does associating with kin affect growth of juvenile Atlantic salmon in the wild? <i>Griffiths, Sian and J. Armstrong</i>	85
Experimental investigations of the relationships between growth and density of juvenile Atlantic salmon in the wild <i>Armstrong, John D., K. Martin-Smith and D. Stewart</i>	89
Do salmon hatcheries select for high metabolic rate? A model and evidence from otolith microstructure <i>Reinhardt, Ulli</i>	95
Dramatic acceleration of salmonid growth rates using genetic manipulation: why don't wild fish grow this fast? <i>Abrahams, Mark, and R. Devlin</i>	99
Why do salmonids not grow faster? - growth hormone and trout performance in streams <i>Johnsson, Jorgen</i>	103
Long-term growth and energy costs of reduced food availability in overwintering salmon <i>Morgan, I., N. Metcalfe</i>	107
Local adaptations or phenotypic plasticity in thermal performance? <i>Jensen, Arne J., T. Forseth and B. Johnsen</i>	111
Aspects of size and growth in the divergence of new salmon populations <i>Kinnison, Michael, et al.</i>	115
Natural selection on juvenile body size in an Atlantic salmon restoration project <i>Hendry, A.P, M.T. Kinnison and B. Letcher</i>	121

The consequences of variable time of smolt migration of Atlantic salmon in North Iceland Antonsson, Thorolfur and S. Gudjonsson	127
An age and growth comparison between juvenile Atlantic salmon 'movers' and 'stayers' in the Ponoï River system, northern Russia Crabbe, Sarah, F. Whoriskey and D. Noakes	135
Effect of seawater entrance on feeding and growth of steelhead smolts Pirhonen, Juhani, C. Schreck and P. Reno.....	139
Testing predictions from a spatially-explicit bioenergetic model for age-0 atlantic salmon using fluxes of trace elements Kennedy, B.P., C.L. Folt and K.H. Nislow.....	141
